FLUID POWER

FLUID POWER SOLUTIONS

TECHNICAL CATALOGUE

HYDRAULICS • HYDRO-PNEUMATICS • PNEUMATICS
CLAMPING DEVICES • WORK HOLDING SOLUTIONS

Year Established: 1972

Quality certification: ISO 9001-2015

Products manufactured: Hydraulic, Hydro-Pneumatic and Pneumatic Cylinders, Systems, Clamping Devices and Work Holding Solutions.

Segments Served: Machine Tool Industries, Material Handling Equipment, Steel Mills, Injection Moulding Machines, Marine & Mining Equipment and Construction Equipment.

Business profile: With over four decades of experience in the field of Fluid Power, PREAC is a name synonymous with Quality & Reliability. Supported by the latest machinery and testing equipment, PREAC offers a wide range of standard and customized solutions for the discerning customer. The company today represents the highest standards in products and services, ever growing and ever improving its processes to place you right on the top.

INDEX

PNEUMATICS & HYDRO-PNEUMATICS

1) Pneumatic Cylinder - Heavy Duty	
LA Series.....	1.210/1
Std. Mounting (Front Flange, Rear Flange & Rear Clevis).....	1.210/2
Std. Mounting (Nose Mounting, Foot Mounting & Intermediate Trunnion).....	1.210/3
Technical Data & Ordering Detail	1.210/4
2) Hydro-Pneumatic Tool De-Clamp Cylinder - PCS Series.....	1.310
3) Hydro-Pneumatic Tool De-Clamp Cylinder - PCT Series.....	1.320
4) Hydro-Pneumatic Intensifier for Machining Centers.....	1.330

HYDRAULIC CYLINDERS

1) Lh7 Series.....	2.110/1
Std. Mounting (Front Flange, Rear Flange & Intermediate Trunnion).....	2.110/2
Std. Mounting (Rear Clevis, Rear Eye & Foot Lug).....	2.110/3
Technical Data & Ordering Details.....	2.110/4
Piston Rod Eye & Piston Rod Fork for LH7.....	2.110/5
2) Hh16 Series	2.210/1
Std. Mounting (Front Flange, Rear Flange & Intermediate Trunnion).....	2.210/2
Std. Mounting (Rear Clevis, Rear Eye & Foot Lug).....	2.210/3
Technical Data & Ordering Details	2.210/4
Piston Rod Eye & Piston Rod Fork for HH16	2.210/5

INDEX

3) Hh21 Series.....	2.310/1
Std. Mounting (Head Flange, Cap Flange & Ext. Tie Rod Head).....	2.310/2
Std. Mounting (Intermediate Trunnion, Head Trunnion & Ext. Tie Rod Cap End).....	2.310/3
Std. Mounting (Cap Clevis, Cap Eye & Foot Lug).....	2.310/4
Technical Data & Ordering Details.....	2.310/5
Piston Rod Eye & Piston Rod Fork for HH21.....	2.310/6
4) Wh21 Series.....	2.410/1
Std. Mounting (Front Flange, Rear Flange & Intermediate Trunnion).....	2.410/2
Std. Mounting (Rear Clevis, Rear Eye & Foot Lug).....	2.410/3
Rectangular Flange Details.....	2.410/4
Technical Data & Ordering Details.....	2.410/5
Piston Rod Eye & Piston Rod Fork for WH21.....	2.410/6
5.1) Nh16 Series.....	2.510/1
Std. Mounting (Front Flange, Rear Flange & Intermediate Trunnion).....	2.510/2
Std. Mounting (Rear Eye with Spherical Bearing & Foot Lug).....	2.510/3
Technical Data & Ordering Details.....	2.510/4
5.2) Nh25 Series	2.520/1
Std. Mtg. (Front Flange, Rear Flange & Intermediate Trunnion, Rear Eye with Spherical Bearing)....	2.520/2
Technical Data & Ordering Details	2.520/3
6) Ch16 Series.....	2.610/1
Std. Mounting (Front Flange, Intermediate Flange & Intermediate Trunnion).....	2.610/2
Std. Mounting (Rear Clevis, Rear Eye & Foot Lug).....	2.610/3
Technical Data & Ordering Details	2.610/4

Pneumatic Cylinders - LA Series

Preac
FLUID POWER

- Rated Pressure 10 kg/cm²
- Cylinder bore diameters up to 450mm
- Temperature range:- -20°C to 80°C. (optional seals for temp. up to 180°C)
- Wear and Corrosion resistant, hard-chrome plated piston rods for long seal life

BASIC CYLINDER

FOR BORE Ø75 & ABOVE
SEPARATE CARTRIDGES ARE
PROVIDED AS SHOWN IN
DOTTED LINE

SPECIFICATION OF MATERIALS

END COVERS : Aluminium / Steel

CYLINDER : Aluminium / Steel
BARREL

PISTON : Aluminium / Steel

PISTON BEARING : Teflon / Teflon composite for maximum rigidity and minimum friction

PISTON ROD : Medium carbon steel, ground Hard-chrome plated & polished to a maximum roughness of Ra=0.4 microns

PISTON ROD BEARING : PB / Teflon composite for maximum rigidity and minimum friction

SEALING SYSTEM : Wear compensating precisely manufactured NBR/Polyurethane seals. Special sealing systems also available

MOUNTINGS : Accurately machined steel suitable for heavy duty application

TIE RODS : Cold drawn steel

Hydro-Pneumatic Tool De-Clamp Cylinders PCS Series

Preac
FLUID POWER

for Machining Centers (VMC & HMC)

Application

- To provide high thrust over a short stroke using compressed air. Ideal for use where hydraulics is not used or cannot be used. Widely used in machining centers (VMC & HMC).

Priming

- Pressurize chambers C2 & C4. Open the bleed port & pour oil into the reservoir. When oil starts to flow out of bleed port, plug it. The system is primed & ready to use.

Working Principle

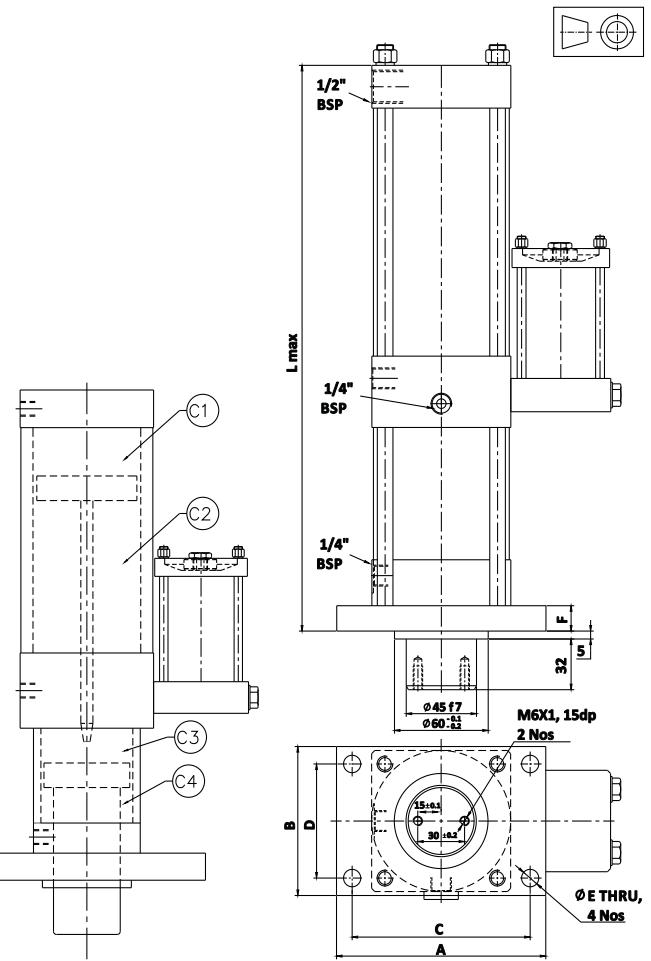

- Compressed air in chamber C1 forces the piston rod into chamber C3 which is primed with oil from the reservoir. As the rod progresses into the sealed area of chamber C3 the oil gets pressurized proportionate to the intensification ratio & this moves the piston rod over the required high pressure stroke. Compressed air is then supplied to chambers C2 & C4 to return both pistons to their original position.

Maintenance

- This unit can operate on dry & filtered air. It is advisable to use lubricated air for longer life. Once lubricated air is used, the unit should not be operated on dry air.
- Oil level in the reservoir should be maintained as marked.
- If excess oil is observed through the valve exhaust ports or oil level in the reservoir drops quickly, there may be a seal failure. If so, replace entire seal kit.

Note

- For horizontal mounting replace 'V' by 'H' in Part number.
- Fully loaded version with valves, limit switches & Air blast can be offered on request.

Hydro-Pneumatic Intensifiers for Machining Centers (VMC & HMC)

Preac
FLUID POWER

Description

- The Hydro-Pneumatic Intensifier consists of a double acting Pneumatic cylinder & a hydraulic high pressure chamber. The Pneumatic cylinder piston rod is forced into the hydraulic chamber resulting in high pressure oil displacement.

Application

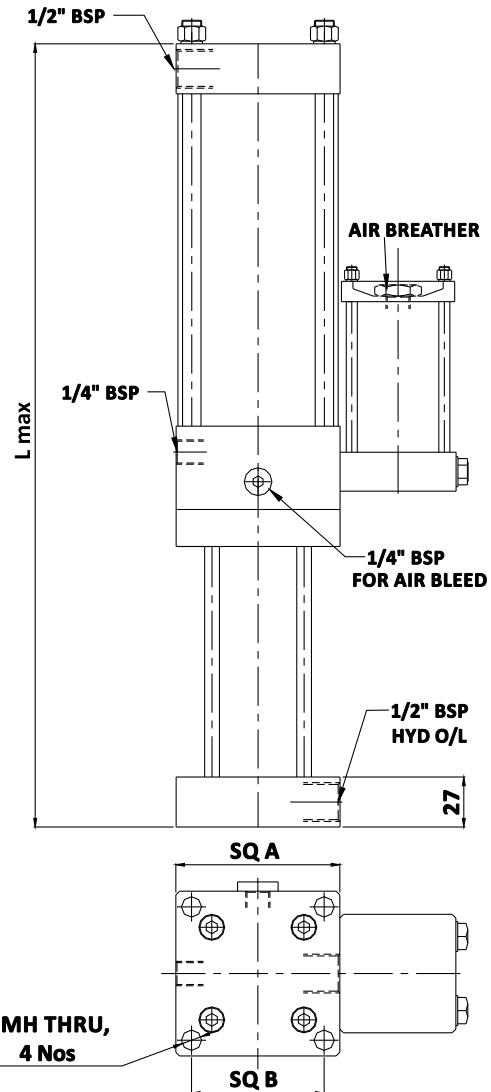

- For actuating the Tool De-clamping cylinders in machining centers.

Operation

- When compressed air is allowed into the positive chamber of the Pneumatic cylinder, oil in the hydraulic side gets pressurized and is forced out. This oil operates the clamping cylinders. After changing the direction of air, the pneumatic piston returns and the job gets de-clamped.

Important Notes

- Output pressure should not exceed 175kg/cm²
- This can be used to operate only single acting cylinders.
- For seal kits, add Prefix SK to part No.
- All dimensions are in mm.
- Overall dimensional tolerance $\pm 0.5\text{mm}$.

SUPPLY SPECIFICATION

Hydraulic Cylinders - LH7 Series

Preac
FLUID POWER

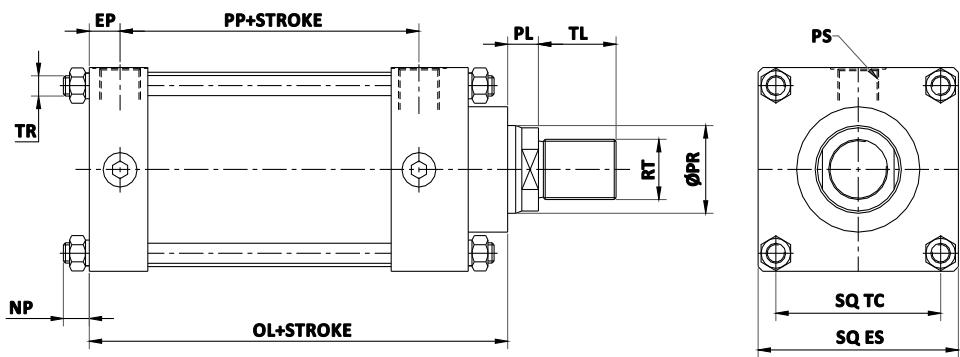

- Rated Pressure 50 kg/cm²
- Peak Pressure 70 kg/cm²
- Cylinder bore diameters up to 350mm
- Temperature range:- 20°C to 90°C. (optional seals for temp. up to 180°C)

SPECIFICATION OF MATERIALS

END COVERS	: Precision machined steel
CYLINDER BARREL	: Cold drawn seamless steel, honed and polished internally to a maximum surface roughness of Ra=0.4 microns
PISTON	: Steel, single piece, precisely machined for perfect alignment
PISTON BEARING	: Polyester fabric with polyester resin+PTFE for maximum rigidity
PISTON ROD	: Medium carbon steel, ground Hard-chrome plated & polished to a maximum roughness of Ra=0.4 microns
PISTON ROD BEARING	: Polyester fabric with polyester resin+PTFE for maximum rigidity
SEALING SYSTEM	: We use a wide range of international standard sealing systems to suit various applications & temperatures
MOUNTINGS	: Accurately machined steel suitable for heavy duty application
TIE RODS	: Cold drawn steel

Hydraulic Cylinders - HH16 Series

Preac
FLUID POWER

- Rated Pressure 160 kg/cm²
- Peak Pressure 240 kg/cm²
- Cylinder bore diameters up to 350mm
- Temperature range:- 20°C to 90°C. (optional seals for temp. up to 180°C)

BASIC CYLINDER

SPECIFICATION OF MATERIALS

END COVERS : Precision machined steel

CYLINDER BARREL : Cold drawn seamless steel, honed and polished internally to a maximum surface roughness of Ra=0.4 microns

PISTON : Steel, single piece, precisely machined for perfect alignment

PISTON BEARING : Polyester fabric with polyester resin+PTFE for maximum rigidity

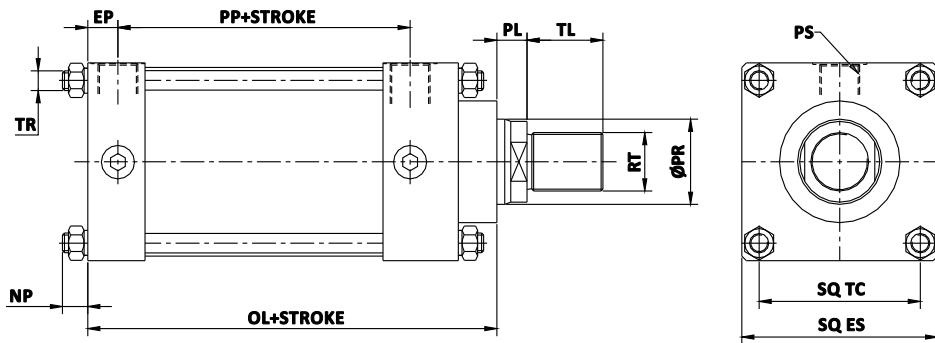

PISTON ROD : Medium carbon steel, toughened ground Hard-chrome plated & polished to a maximum roughness of Ra=0.4 microns

PISTON ROD BEARING : Polyester fabric with polyester resin+PTFE for maximum rigidity

SEALING SYSTEM : We use a wide range of international standard sealing systems to suit various applications & temperatures

MOUNTINGS : Accurately machined steel suitable for heavy duty application

TIE RODS : High tensile steel

Hydraulic Cylinders - WH21 Series

Preac
FLUID POWER

- Rated Pressure 210 kg/cm²
- Peak Pressure 315 kg/cm²
- Cylinder bore diameters up to 400mm
- Temperature range:- 20°C to 90°C. (optional seals for temp. up to 180°C)

SPECIFICATION OF MATERIALS

END COVERS : Precision machined steel

CYLINDER BARREL : Cold drawn seamless steel tube, honed and polished internally to a maximum surface roughness of Ra=0.4 microns

PISTON : Steel, single piece, precisely machined for perfect alignment

PISTON BEARING : Polyester fabric with polyester resin+PTFE for maximum rigidity

PISTON ROD : Medium carbon steel, toughened, ground Hard-chrome plated & polished to a maximum roughness of Ra=0.4 microns

PISTON ROD BEARING : Polyester fabric with polyester resin+PTFE for maximum rigidity

SEALING SYSTEM : We use a wide range of international std sealing systems to suit various applications & temperatures

MOUNTINGS : Accurately machined steel suitable for heavy duty application

Hydraulic Cylinders - NH16 Series

(Mill Duty Cylinders as per ISO 6020/1)

Preac
FLUID POWER

- Rated Pressure 160 kg/cm²
- Peak Pressure 240 kg/cm²
- Cylinder bore diameters up to 250mm
- Temperature range:- -20°C to 90°C. (optional seals for temp. up to 180°C)

BASIC CYLINDER

SPECIFICATION OF MATERIALS

END COVERS : Precision machined steel

CYLINDER BARREL : Cold drawn seamless steel tube, honed and polished internally to a maximum surface roughness of Ra=0.4 microns

PISTON : Steel, single piece, precisely machined for perfect alignment

PISTON BEARING : Polyester fabric with polyester resin+PTFE for maximum rigidity

PISTON ROD : Medium carbon steel, toughened, ground Hard-chrome plated & polished to a maximum roughness of Ra=0.4 microns

PISTON ROD BEARING : Polyester fabric with polyester resin+PTFE for maximum rigidity

SEALING SYSTEM : We use a wide range of international std sealing systems to suit various applications and temperatures

MOUNTINGS : Accurately machined steel suitable for heavy duty application

Hydraulic Swing Cylinders

Top Mounted, Double Acting

Preac
FLUID POWER

Description

- These cylinders are "Pull Type" cylinders where the piston rotates by 90° (in CW or CCW direction) during the swing stroke and then travels in a straight line during the clamping stroke. A solid, one piece construction ensures perfect alignment of internal components and maximum clamping rigidity.

Features

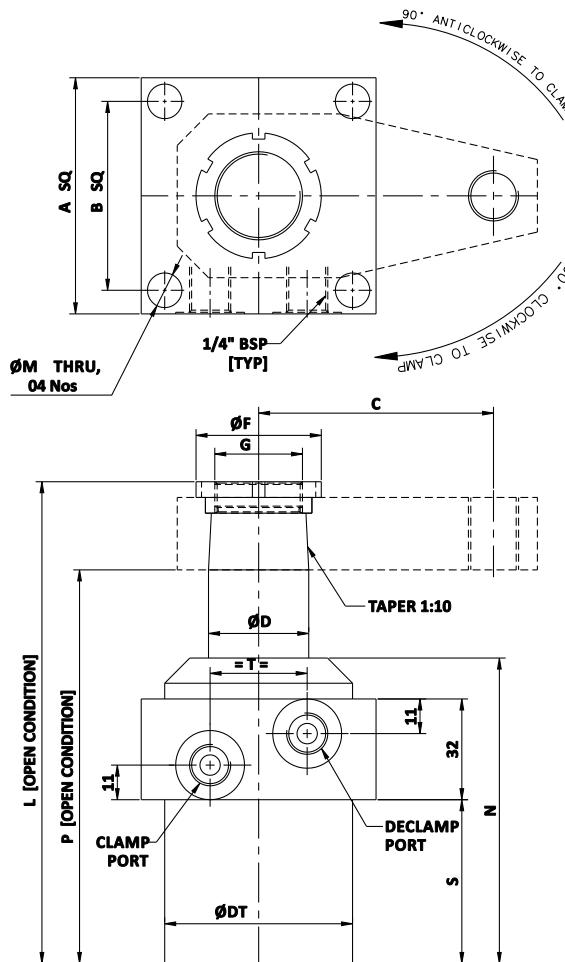

- Type : Double Acting
- Min. working pressure : 20 kg/cm²
- Max. working pressure : 160 kg/cm²
- Short swing stroke allows for compact design and maximum rigidity.
- Standard clamping stroke of 14 mm gives longer "working stroke".

Application

- Hydraulic swing cylinders are used for clamping where it is necessary to keep the clamping area clear for unrestricted loading and unloading of work pieces.

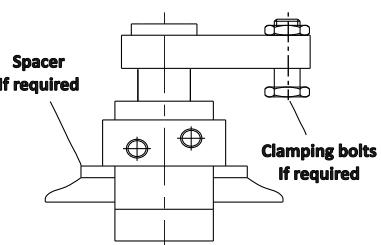

Important Notes

- Do not load the swing mechanism during tightening of the clamping strap.
- Clamp the job in the straight clamping stroke only.
- Adjust the oil flow rate such that total clamping time is more than one second.
- For seal kits, add prefix SK to Part no.
- For Clamping Strap details, refer 4.191

Hydraulic Vertical Swing Cylinders TYPE 1 - Double Acting

Preac
FLUID POWER

Description

- This is a double acting cylinder where the job gets clamped in the piston push direction. During de-clamping, the strap is almost vertical, leaving the clamping area clear for easy loading and unloading of work pieces.
- The clamping strap is connected to the piston rod by a linkage mechanism.

Features

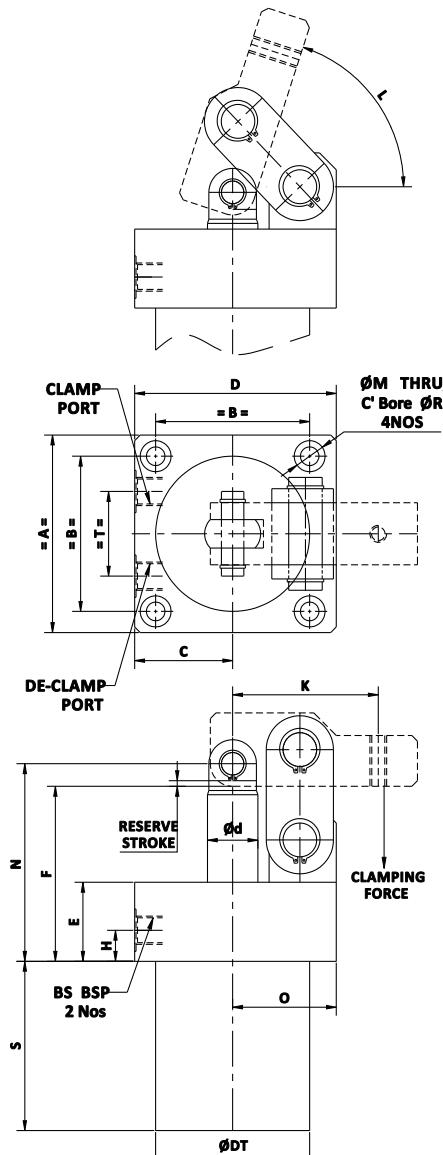

- Type : Double Acting
- Min. Working pressure : 15 kg/cm²
- Max. Working pressure : 160 kg/cm²
- Compact body, high rigidity.
- Suitable for high clamping forces.

Application

- Hydraulic swing cylinders are used for clamping where it is necessary to keep the clamping area clear for unrestricted loading and unloading of work pieces.

Important Notes

- Clamping Strap to be ordered separately. For details refer 4.192.
- For seal kits, add prefix SK to part no.

Hydraulic Vertical Swing Cylinders

TYPE 2 - Double Acting (Manifold port)

Preac
FLUID POWER

Description

- This is a double acting cylinder where the job gets clamped in the piston push direction. During de-clamping, the strap is almost vertical, leaving the clamping area clear for easy loading and unloading of work pieces.
- The clamping strap is connected to the piston rod by a linkage mechanism.

Features

- Type: Double Acting with Manifold Port
- Min. Working pressure : 5 kg/cm²
- Max. Working pressure : 70 kg/cm²
- Compact body, high rigidity.
- Suitable for high clamping forces.

Application

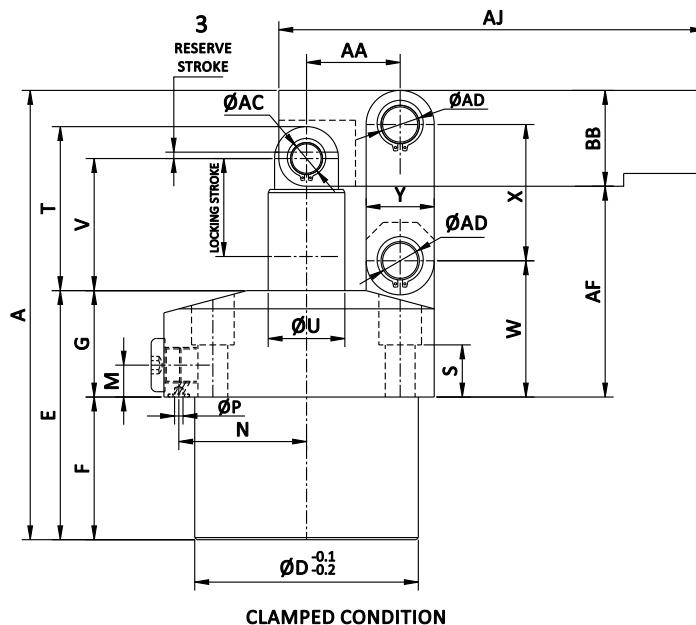

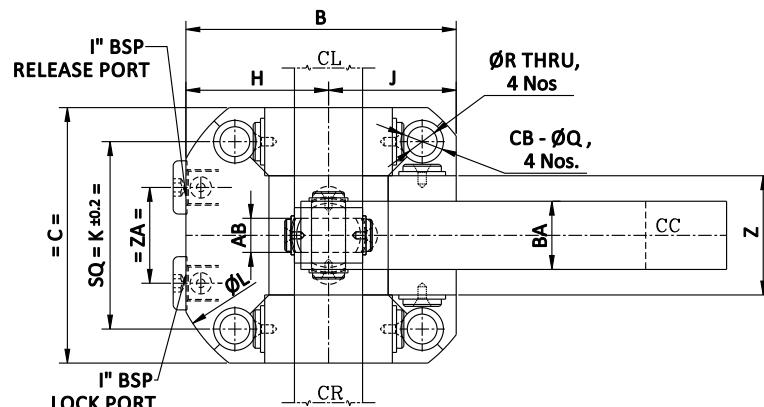

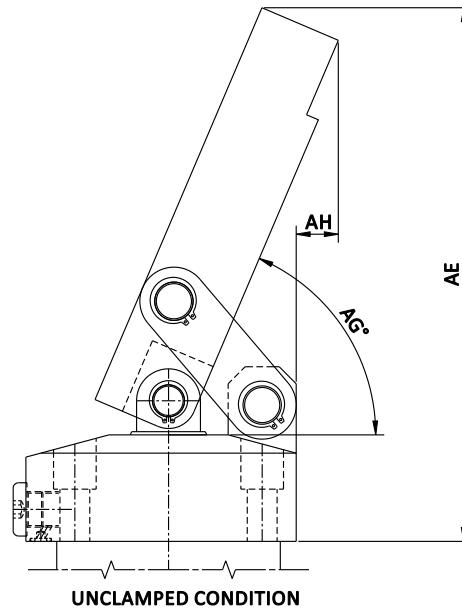

- Hydraulic swing cylinders are used for clamping where it is necessary to keep the clamping area clear for unrestricted loading and unloading of work pieces.

Important Notes

- Clamping Strap to be ordered separately. For details refer 4.193.
- For seal kits, add prefix SK to part no.

- All dimensions are in mm
- Overall dimensional tolerance ± 0.5 mm

Pneumatic Swing Cylinder

Double Acting

Preac
FLUID POWER

Description

- These cylinders are "Pull-Type" cylinders where the piston rotates by 90° (in CW or CCW direction) during the swing stroke and then travels in a straight line during the clamping stroke. A solid, one piece construction ensures perfect alignment of internal components and maximum clamping rigidity.

Features

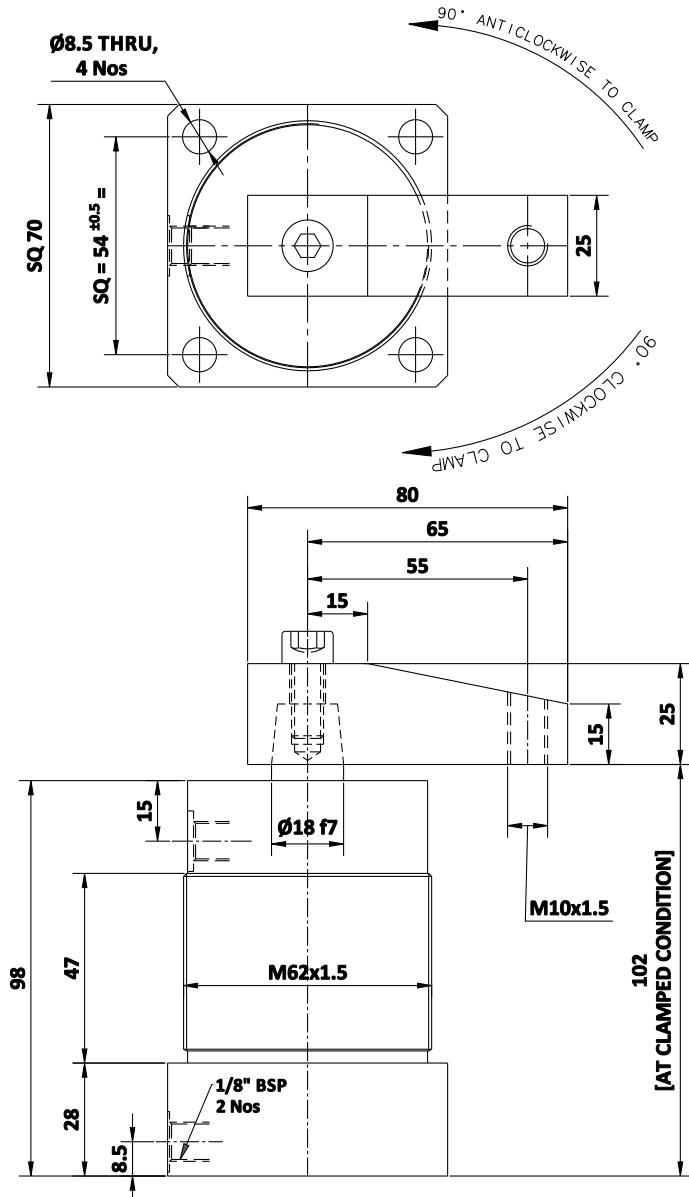

- Type : Double Acting
- Min. working pressure : 5 kg/cm²
- Max. working pressure : 15 kg/cm²

Application

- Pneumatic swing cylinders are used for light clamping when it is necessary to keep the clamping area clear for unrestricted loading and unloading of work pieces.

Important Notes

- To avoid the damage of swing mechanism hold the clamping strap in a vice while tightening and loosening the clamping strap nut.
- Clamp the job in the straight clamp stroke only.
- Do not exceed standard strap length.
- To prevent damage to the swing mechanism due to impact, use flow control valves at both ports.
- For seal kits, add prefix SK to part no.

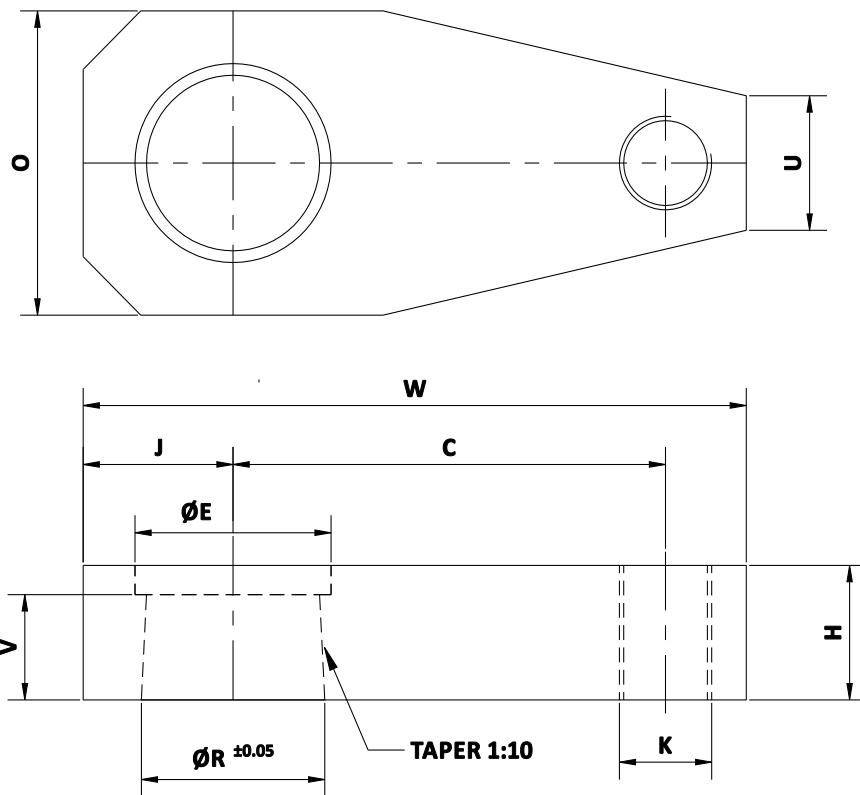

•All dimensions are in mm

•Overall dimensional tolerance ±0.5

Hydraulic Block Cylinders

Single / Double Acting

Preac
FLUID POWER

Description

- Hydraulic Block cylinders are very compact, heavy duty cylinders and can be mounted very easily and in many different ways.

Features

- Type : Single & Double Acting
- Min. working pressure : 5 kg/cm²
- Max. working pressure : 200 kg/cm²
- High size to force ratio compared to conventional cylinders.

Application

- Suitable for short stroke clamping applications. Can also be used for positioning, supporting, lifting, pulling etc...

Important Notes

- For side mounting, positive stopper should be provided.
- For single acting cylinders, breather should be protected from cutting liquids and coolants
- For seal kits, add prefix SK to part no.

• All dimensions are in mm

• Overall dimensional tolerance ± 0.5 mm

Mounting Arrangement

**Description**

- Pull cylinders, similar in size and construction to Swing Cylinders, ensure perfect alignment of internal component and maximum clamping rigidity.

Features

- Type : Single & Double Acting
- Min. working pressure : 5 kg/cm²
- Max. working pressure: 200 kg/cm²

Application

- The simple arrangement ensures easy assembly for standard clamping applications.

Important Notes

- For single acting cylinders breather should be protected from cutting liquids and coolant.
- For seal kits, add prefix SK to part no.

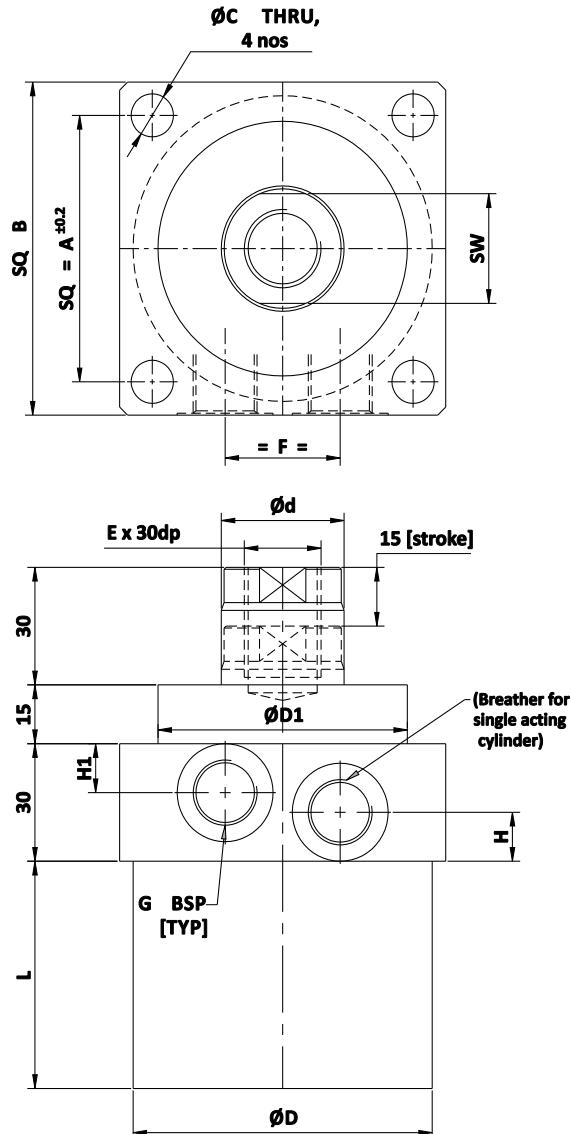

•All dimensions are in mm

•Overall dimensional tolerance ± 0.5 mm

Hydraulic Compact Cylinders

Double Acting

Preac
FLUID POWER

Description

- This cylinders are double acting, solid piston cylinders and are very compact in the axial direction.

Features

- Type : Double Acting
- Min. working pressure : 5 kg/cm²
- Max. working pressure : 150 kg/cm²

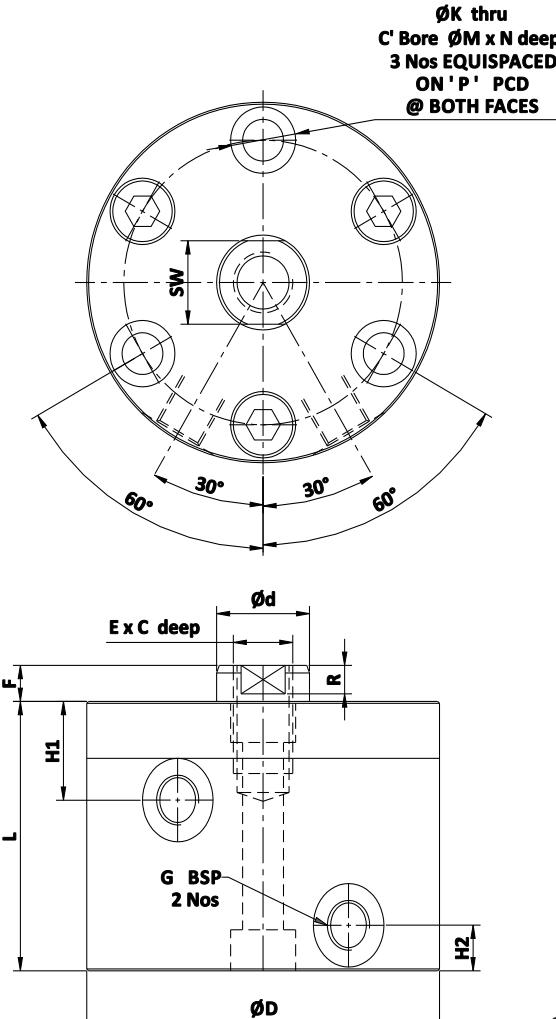

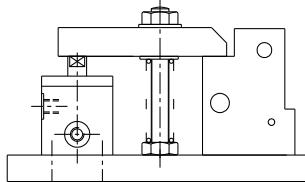

Application

- These are used where the height is a constraint. The simple mounting arrangement makes the cylinders very easy to use.

Important Notes

- Due to the compact design, port thread depth is short. Reduce the standard connector thread length to suit the port.
- For seal kits, add prefix SK to part no.

Hydraulic Threaded Body Cylinders

Single Acting, Spring Return

Preac
FLUID POWER

Description

- This is a compact, push type, single acting spring return cylinder where the threaded body allows for adjustable mounting. It also has fixed mounting holes at its base.

Features

- Type : Single Acting, Spring Return
- Min. working pressure : 10 kg/cm²
- Max. working pressure : 200 kg/cm²

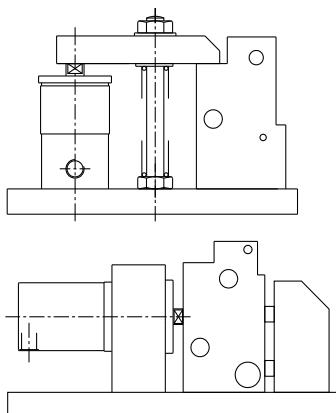

Application

- These can be used for direct clamping as well as for positioning and support. The threaded body also makes the cylinder easy to install.

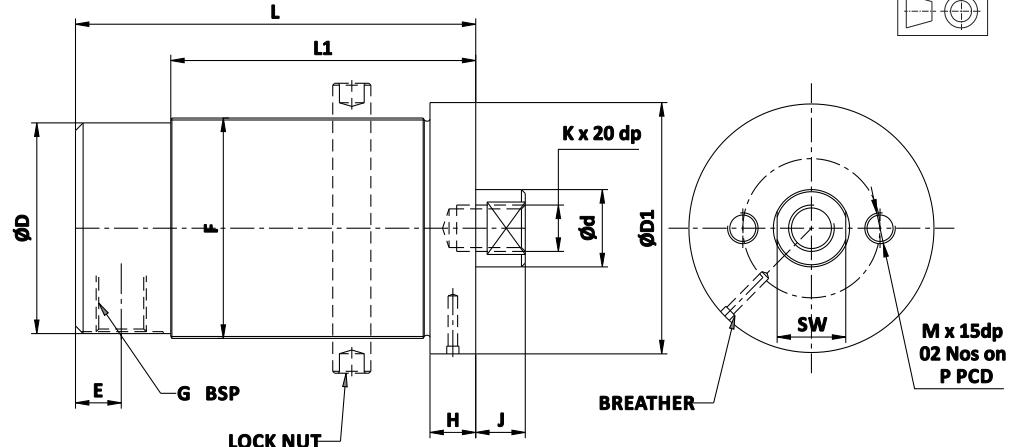

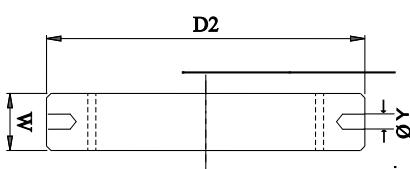

Important Notes

- Breather should be protected from cutting fluid and coolant.
- Heavy extensions to piston rod can influence return stroke of the cylinder.
- For seal kits, add prefix SK to part no.

Mounting Arrangement

LOCK NUT

- All dimensions are in mm
- Overall dimensional tolerance ±0.5 mm

Hydraulic Manifold Cylinders

Single Acting, Spring Return

Preac
FLUID POWER

Description

- These are push type, single acting spring return cylinders which can be fitted either in tapped holes in the fixture or in a manifold.

Features

- Type : Single Acting, Spring Return
- Min. working pressure : 10 kg/cm²
- Max. working pressure : 200 kg/cm²

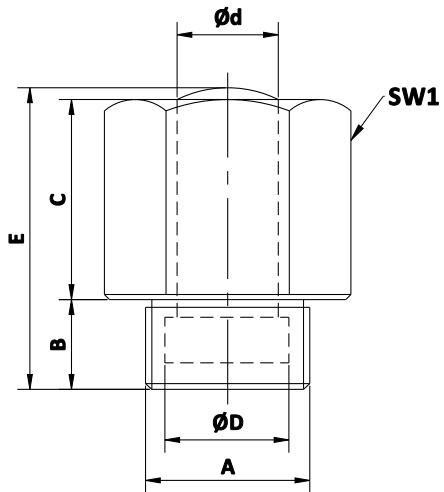

Application

- Suitable for mounting close together.
- Multiple piping can be eliminated.

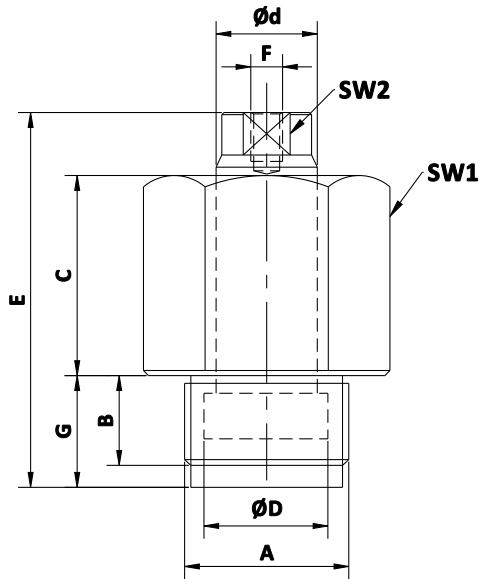

Important Notes

- Threaded body cylinders must not be loaded in retracted position.
- Breather should be protected from cutting liquids and coolants.
- For seal kits, add prefix SK to part no.

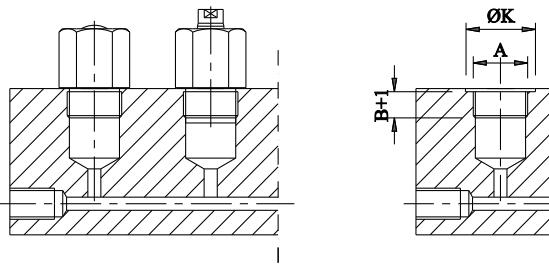

Type-A

Type-B

Mounting Arrangement

Hydraulic Mini Threaded Cylinders

Single Acting, Spring Return

Preac
FLUID POWER

Description

- These cylinders can be threaded directly into the tapped holes of the fixture, down to hexagonal/ slotted section of cylinders body. Spacings between cylinders can be reduced when arranged in a row.

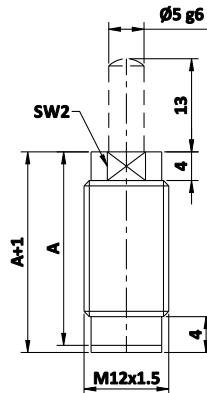

Features

- Type : Single Acting
- Max. working pressure : 200 kg/cm²
- Since oil is supplied through drilled passages in the fixture, special seals are provided for self sealing.

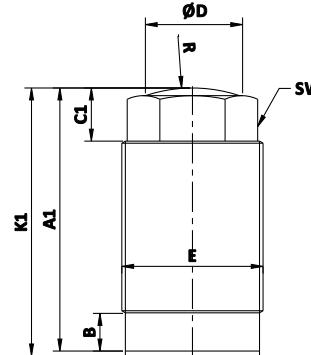

Application

- Used in multiple clamping fixture to hold small parts. These cylinders can be arranged in a clamping bar.

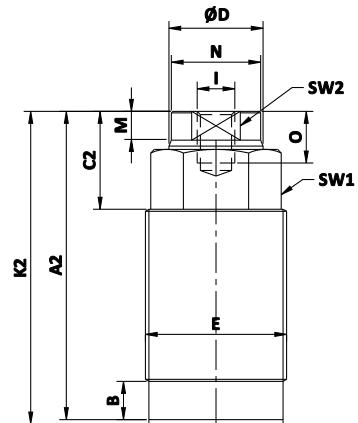

Type-A

Type-B

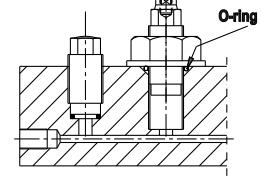

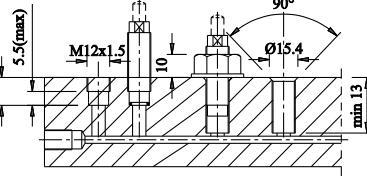

Type-C

Important Notes

- Threaded body cylinders must not be loaded in the retracted position.
- Cylinder should be protected from cutting liquids and coolants.

Mounting Arrangement

• All dimensions are in mm

• Overall dimensional tolerance ± 0.5 mm

**Description**

- Hydraulic work support is a replacement to the adjustable screw jack. This is not a force giving element but a resistance giving element.

Features

- Min. working pressure : 100 kg/cm²
- Max. working pressure : 250 kg/cm²

Application

- Hydraulic work supports are used to provide a self-adjusting rest for the workpiece, ensuring matching operations. They compensate for work piece surface irregularities & prevent deflection and vibration under matching loads.

Types

Spring forwarding work support

- The plunger in this type of work support is normally in the extended position due to the spring force. The plunger gets pressed either by the weight of a component or by hydraulic pressure, thereby locking it. The spring force can be adjusted with the help of a screw.

Pneumatic forwarding work support

- The plunger in this type of work support is normally in the retracted position due to the spring force. After applying Pneumatic pressure, the plunger moves forward to touch the component. Pneumatic pressure is regulated to control the plunger forwarding force. Hydraulic pressure is applied to lock the plunger.

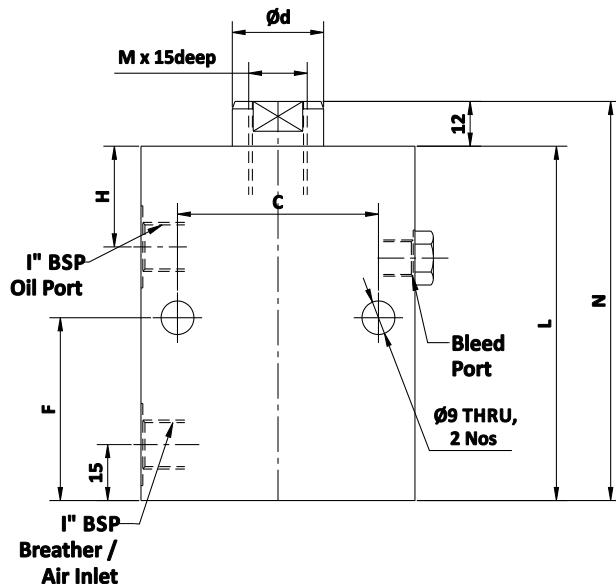

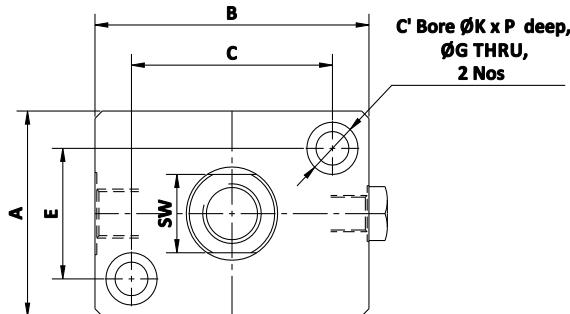

Important Notes

- Breather should be protected from cutting liquids and coolants.
- For seal kits, add prefix SK to part no.

Hydraulic Hollow Piston Cylinders

Single Acting / Spring Return

Preac
FLUID POWER

Description

- This clamping device is a single acting, spring return, push type cylinder with a through hole in the piston rod.

Features

- Type: Single acting, spring return.
- Min. working pressure : 5 kg/cm²
- Max. working pressure : 210 kg/cm²

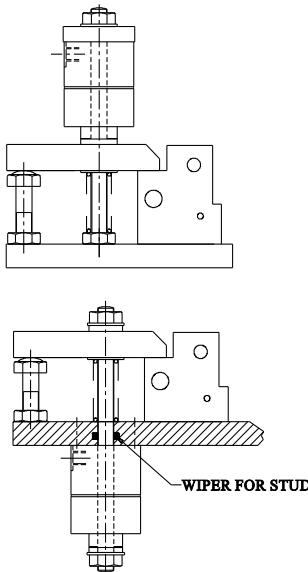

Advantages

- The cylinder can be mounted on the existing fixtures by attaching it to or inserting it over the stud. The stud length may be increased as required. The mounting arrangement can be made as shown in the figures to achieve maximum clamping efficiency.

Important Notes

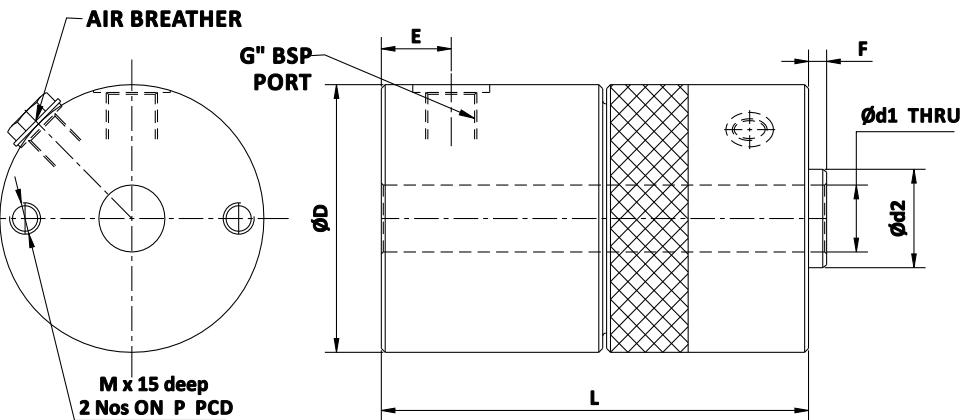

- Breather should be protected from cutting liquids and coolants.
- For seal kits, add prefix SK to part no.

Hydraulic Die Clamping Cylinders

Single Acting / Spring Return Pull Type

Preac
FLUID POWER

Description

- Die clamping cylinders are pull type, spring return cylinders. An integral 'T', suitable to 28mm 'T' Slot, is provided to the piston rod of the cylinder.

Application

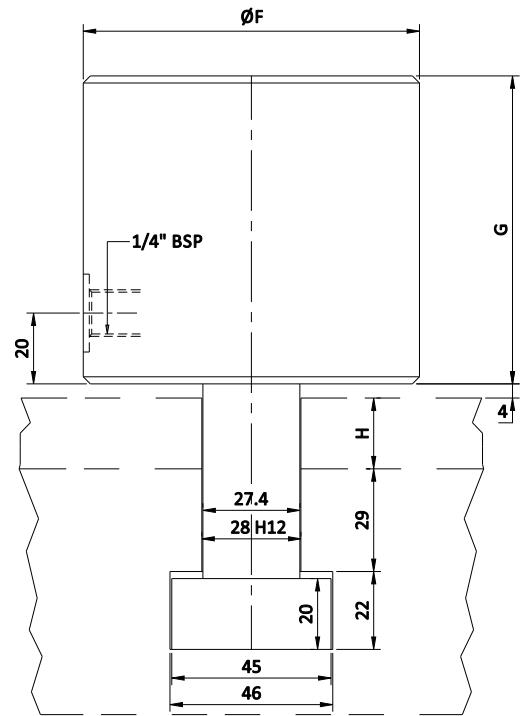

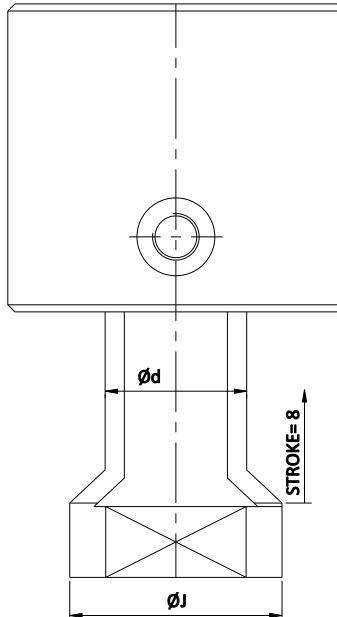

- These cylinders are widely used for the quick change of Dies & Tools on Presses.
- Max. working pressure : 200 kg/cm²

Operation

- For changing the tool, first the cylinder pressure is released and cylinders are moved away from the tool, either manually or by a pneumatic cylinder. After changing the tool, the cylinders are placed back at the clamping points and are pressurized.

Important Notes

- T slot dimensions are as per DIN650.
- Cylinder stroke is only 8mm. Clamping height of different tools must be the same with the tolerance of ±1 mm. Specify dimension 'H' (clamping height of the tool), while ordering the cylinder.
- For seal kits, add prefix SK to part no.

Hydraulic Universal Clamping Cylinders

Double Acting

Preac
FLUID POWER

Description

- This is strictly a push type cylinder, which can be easily installed and consists of a solid body held in position by a locking ring.

Features

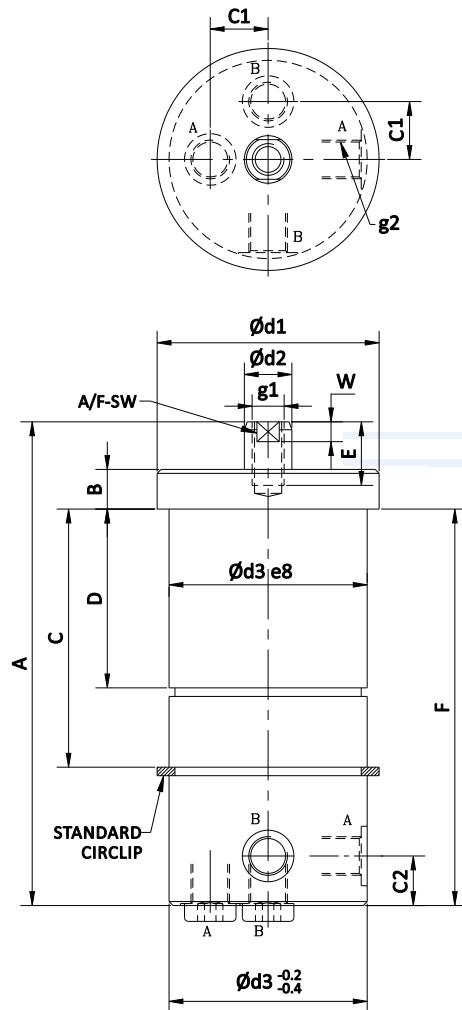

- Type : Double Acting
- Min. working pressure : 5 kg/cm²
- Max. working pressure:210 kg/cm²

Application

- These can be used as lifting and clamping cylinders in machine and fixture building. It can be inserted into the smooth through hole and fixed at different levels by means of a locking ring.
- Installation position: Any

Important Notes

- The mounting dimensions on the matching component have to be strictly maintained.

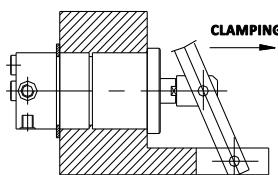

All dimensions are in mm

Overall dimensional tolerance ± 0.5 mm

Hydraulic Rotary Couplings

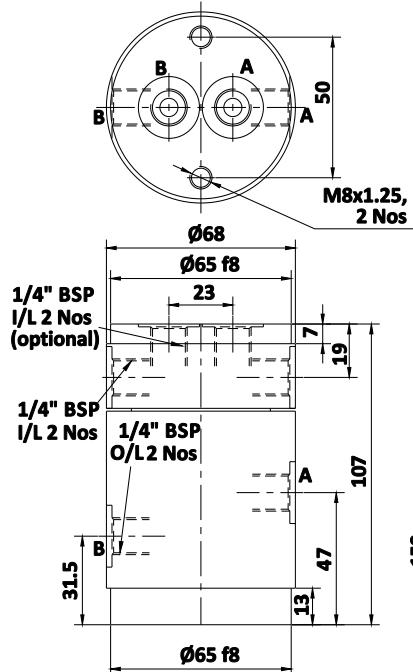

Description

- Rotary couplings supply pressurized oil to rotating and swivelling installations. They are mounted on the installation at the centre of rotation.

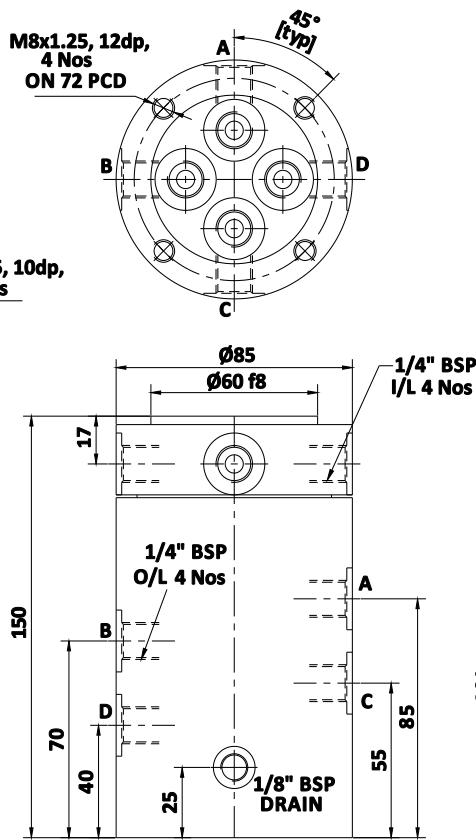

Features

- Min. working pressure : 10 kg/cm²
- Max. working pressure : 210 kg/cm²
- Nominal port orifice dia 5mm

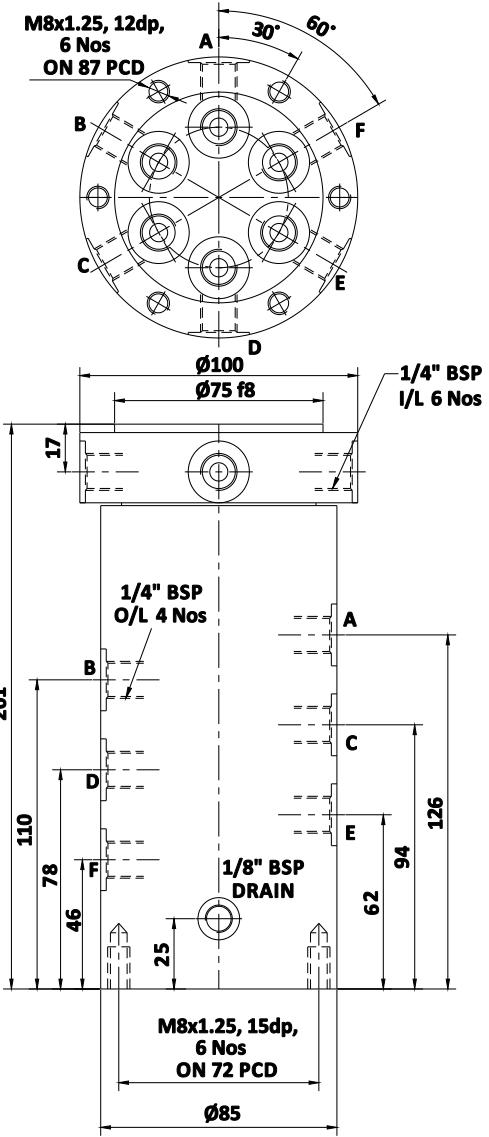

Two Passage Rotary Coupling

Four Passage Rotary Coupling

Six Passage Rotary Coupling

Hydraulic Rotary Valves

for Single & Double Acting Cylinders

Preac
FLUID POWER

Description

- Rotary valves are used in rotary table arrangements where a number of fixtures have to be supplied with hydraulic pressure. These valves are meant for very low speeds of up to 5rpm. It is necessary that both loading and unloading takes place at the same position and that the fixtures are evenly distributed on the rotary table.

Features

- Min. working pressure : 5 kg/cm²
- Max. working pressure : 210 kg/cm²
- Available for both Single and Double Acting applications.
- Nominal port orifice dia 5mm.

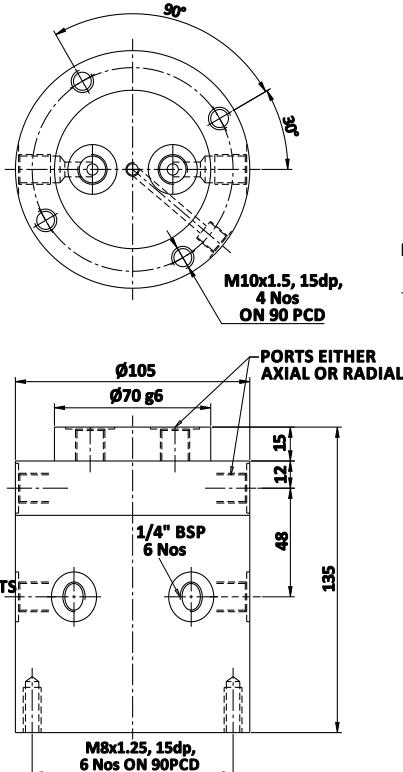

Important Notes

- Use only Hydraulic oil
- Use of anti-rotation key is recommended.
- Custom built Rotary Valves can also be supplied.
- External dimensions are the same for all variants.

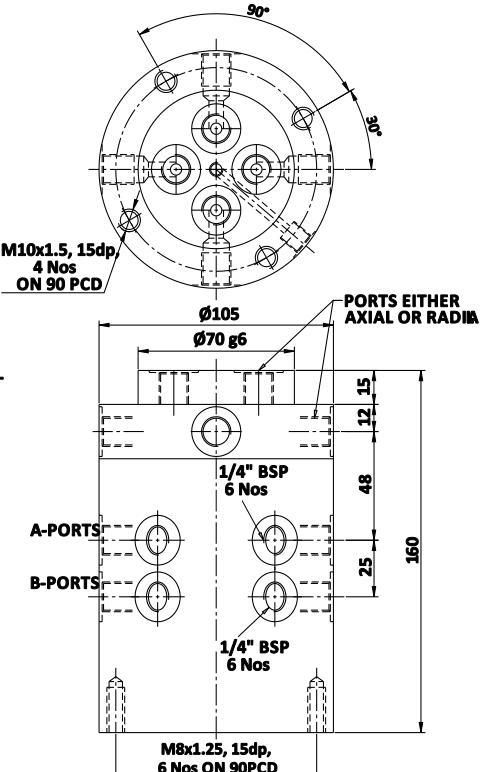

- All dimensions are in mm
- Overall dimensional tolerance ± 0.5 mm

Hydraulic Sequence Valves

Preac
FLUID POWER

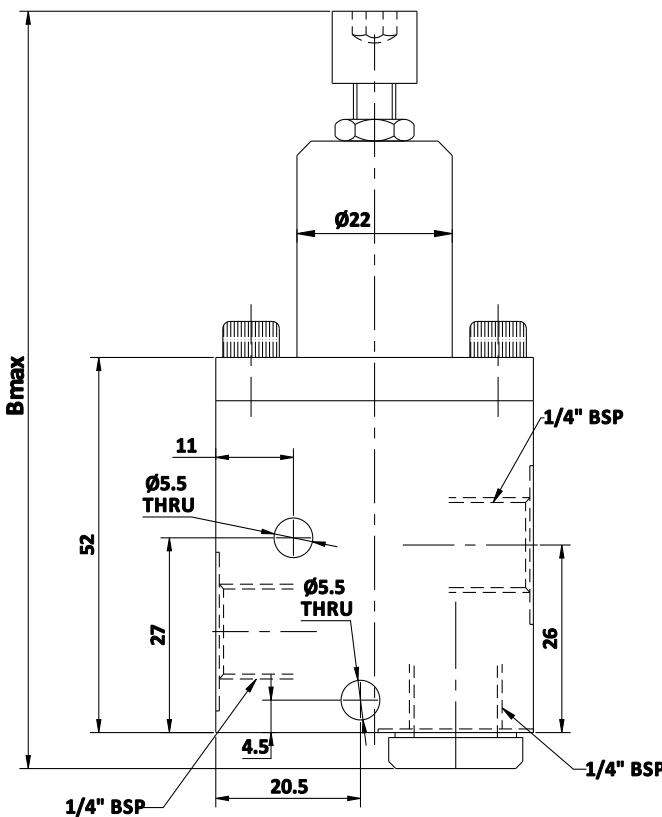

Description

- Sequence valves are used in power work holding circuits for pressure dependent sequence control.

Features

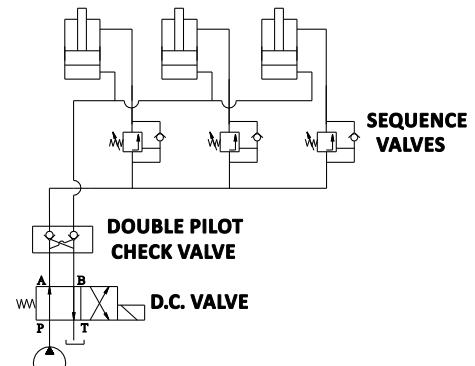

- Min. working pressure : 10 kg/cm²
- Max. working pressure : 210 kg/cm²
- Pressure Adjustment range from 20 kg/cm²
- Compact size allows direct mounting onto the clamping fixture.
- Requires only one pressure line from power unit to the fixture for single acting cylinders.

- All dimensions are in mm
- Overall dimensional tolerance ± 0.5 mm

SPECIFICATIONS					
SIZE	RANGE OF ADJUSTMENT kg/cm ²	PORT SIZE	A	B	STANDARD PART No's

Hydro-Pneumatic Intensifiers

Double Acting

Preac
FLUID POWER

Description

- The Hydro-Pneumatic Intensifier consists of a double acting Pneumatic Cylinder and a high pressure hydraulic chamber. The Pneumatic Cylinder piston rod is forced into the hydraulic chamber resulting in high pressure oil displacement.

Principle

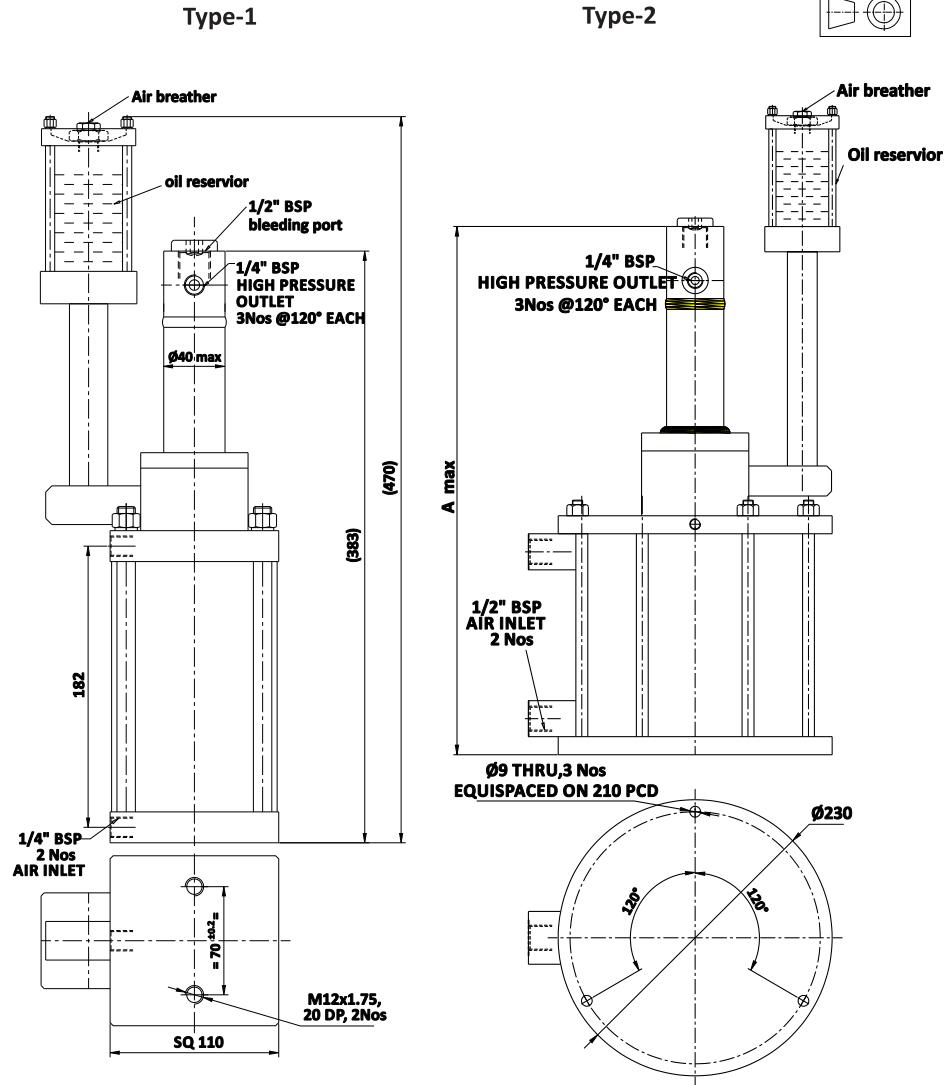

- In the static condition, (Pressure x Area) at air side is equal to (Pressure x Area) at oil side

Operation

- When air is allowed into the positive chamber of the Pneumatic Cylinder, oil on the hydraulic side gets pressurized and is forced out. This oil operates the clamping cylinders. After changing the direction of air the pneumatic piston returns and the job gets declamped.

Important Notes

- Output pressure should not exceed 210 kg/cm²
- This can be used to operate only single acting cylinders.
- For seal kits, add prefix SK to part no.

- All dimensions are in mm
- Overall dimensional tolerance ±0.5 mm

SPECIFICATIONS FOR TYPE-1

SI.No.	INTENSIFICATION RATIO	OIL OUTPUT (cc)	STANDARD PART No

Hydraulic Intensifiers

Double Acting

Preac
FLUID POWER

Description

- A Hydraulic Intensifier is used to boost the low pressure output of a hydraulic power unit. The high pressure output of the intensifier is used in clamping devices.

Important Notes

- The system should be designed to avoid creation of vacuum in the lines.
- Air should be thoroughly bled (removed) from the system before operation and at regular intervals.

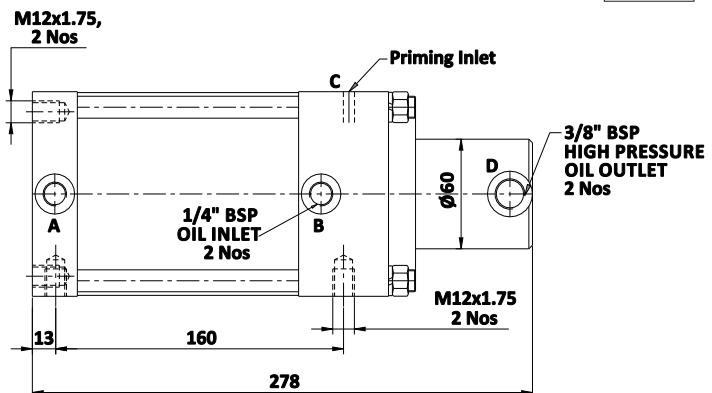

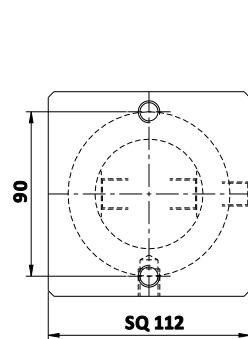

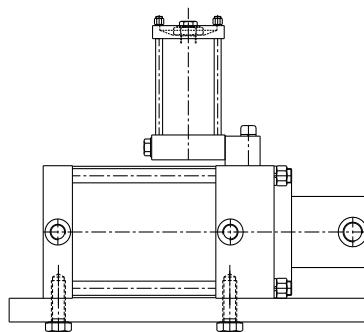

Features

- Type: Double Acting
- Max. Input pressure : 40 kg/cm²
- Intensification ratio : 1:5

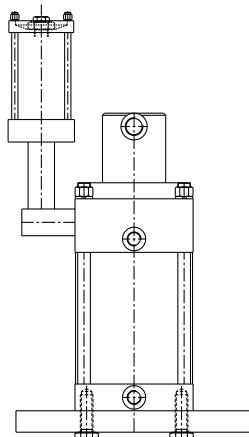

Mounting Arrangements

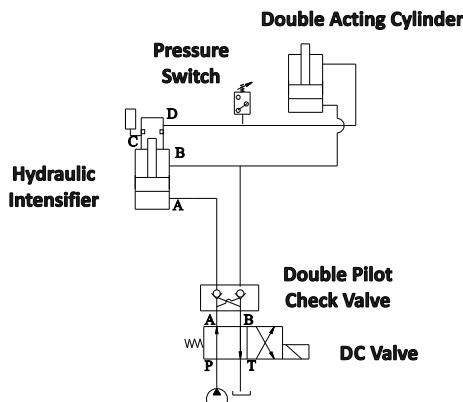

Horizontal Mounting

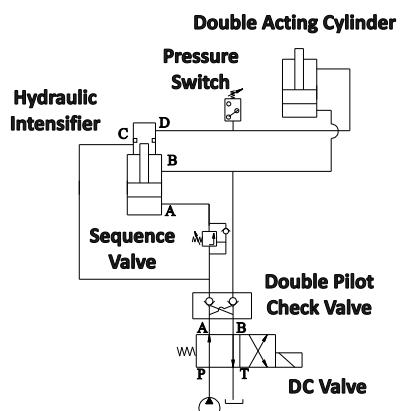

Vertical Mounting

Hydraulic Circuit-1
(Reqd. oil volume < Intensifier oil output)

Hydraulic Circuit-2
(Reqd. oil volume > Intensifier oil output)

Installation Procedure for Rod Seal

Preac
FLUID POWER

Before you begin:

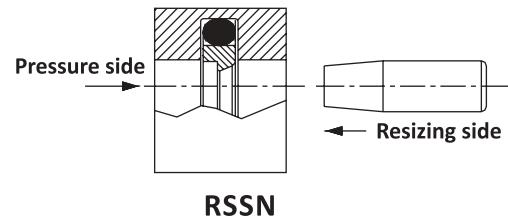

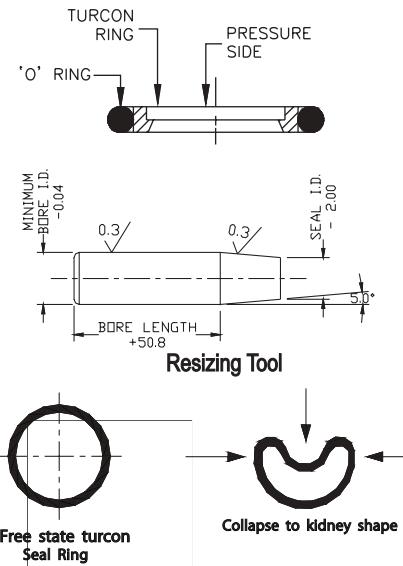

- It is essential that the cylinder tube & piston rod are chamfered.
- Sharp edges must be deburred & filleted or chamfered.
- The crests of threads must be covered.
- Any dust, splinters or other foreign particles must be carefully removed.
- Do not use tools with sharp edges.
- Before assembly, the cylinder, piston rod & seals must be oiled. (Oil used for lubrication must not contain any solid additives)
- Turcon rings can be expanded easily.
- Resizing the tool as per the drawing is recommended.

1. Rod step seal installation data (RSSN-XXX)

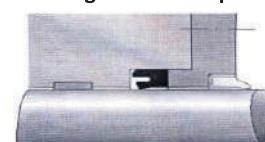

- Step 1: Clean & Lubricate all cylinder parts, seal components & the resizing rod (as noted above)
 - Step 2: Place 'O' Ring into groove. The 'O' Ring must be seated correctly without twisting.
 - Step 3: Collapse the Turcon seal to a kidney shape, ensuring the Turcon seal ring is not creased. Place into groove as shown.
- If possible use fingers to smooth out the I.D. of the Turcon seal ring after installation.
- Step 4: Twist and push the resizing tool into the bore. Remove the resizing tool from the bore after one minute.

2. Rod U-Cup seal installation data (RUCP-XXX)

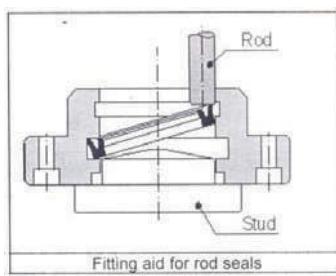

The snap-in fitting, in single piece housings (Installation recommendation I), can be made easier through suitable fitting tools. U-Packing of 35mm diameter (profile thickness 5mm) up to nominal diameter 80mm (profile thickness 10mm) are snapped into the non-split grooves. For this, the ring is formed into a kidney shape & pushed into the rod guide. The tool is withdrawn after the seal snaps into the groove. A further possibility for snap-in fitting of rod seals, exists in the application of a suitable plug and a rod. Here, the seal is first positioned by hand to one side of the groove and then pushed with a rod until it snaps into the groove.

Installation Recommendation I
Snap-in fitting into a non-split housing

Installation Recommendation II
Snap-in fitting into a split housing

Installation Procedure for Piston Seal

Preac
FLUID POWER

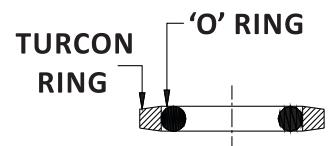

The following installation procedure is for piston seals. Installation tools, as per drawing, are recommended for one piece glands.

Step 1: Clean and lubricate the cylinder parts, hardware & seals.

Step 2: Place 'O' Ring (elastomer) into groove as per drawing. The 'O' Ring must be seated correctly without twisting.

Step 3: Place the loading mandrel onto the piston.

Step 4: Place Turcon seal ring on loading mandrel as per drawing.

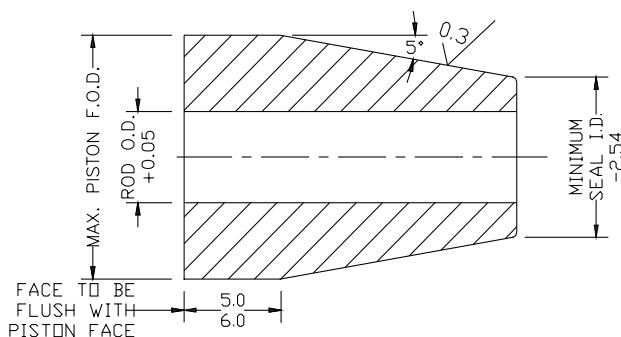

Step 5: Push Turcon seal ring up the loading mandrel and into the groove.

Step 6: Remove the loading mandrel from the piston.

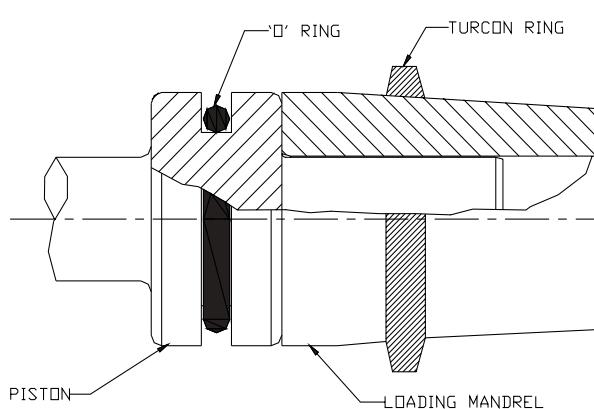

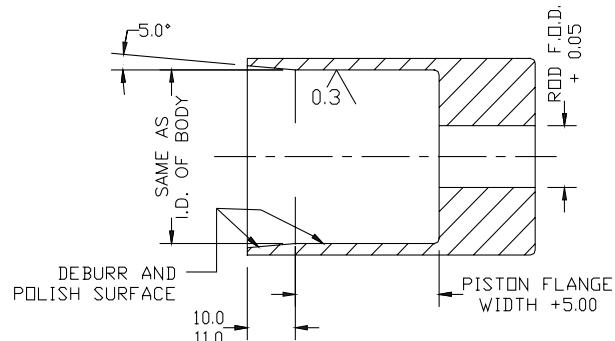

Step 7 : Push, while twisting, the resizing tool onto the seal assembly.
Remove

after one minute.

Loading mandrel

Resizing tool

Data Sheet For Calculation

(For Clamping Devices)

CYLINDER FORCE/ THRUST FORCE/ PULL FORCE/ CLAMPING FORCE
Oil Pressure (bar) x Plunger Effective Area (cm²) = Force (kgf)

CYLINDER OIL CAPACITY
Effective Area (cm²) x Stroke (cm) = Cylinder oil capacity (cm³)

DESIGN FOR CALCULATING CLAMPING FORCE
Rated Clamping Force (kgf) = Spindle H.P x Machine Efficiency x Factor of Safety x 75 x 60
Cutting Speed (m/min)

Where: Machine Efficiency = 0.7 to 0.95
Factor of Safety = 1.5 to 2

Materials	Coefficient of Friction	
	Dry	Lubricated
Cl on Cl	0.3	0.2
Cl on Steel	0.2	0.1
Steel on Steel	0.15	0.12

OR

Rated Clamping Force (kgf) = Spindle Power (kW) x Machine Efficiency x Factor of Safety x 60
Cutting Speed (m/min) x 9.81 x 1000

The minimum clamping force of all clamps should be equal to the rated clamping force of machine.

DESIGN FOR CALCULATING CLAMPING FORCE
Stud bolt size used in the existing fixtures with manual clamping is the best clue for selecting the clamping force. Material strength & grade of bolts is assumed to be class 8.8

Std size	M6	M8	M10	M12	M16	M20
Clamping Force in Kgf	402	732	1160	1686	3140	4900

HINT FOR SELECTION

- Selected cylinder capacity should exceed the force required to do job by 20% to 25%. This ensures longer cycle life without overloading & accommodates the friction loss.

GENERAL POINTS

- Check to see that working fluids are compatible to the cylinder/ element seals
- When ordering Seal Kits for any of the elements in this catalogue, add Prefix 'SK' to the respective model code of the element.

NOTE

- Any Special requirement of cylinder & clamping devices to suit customer's requirement will also be met. Technical specifications mentioned may be subjected to alteration due to continual improvements & development.

How to fix the Clamping Strap on the Swing Cylinder

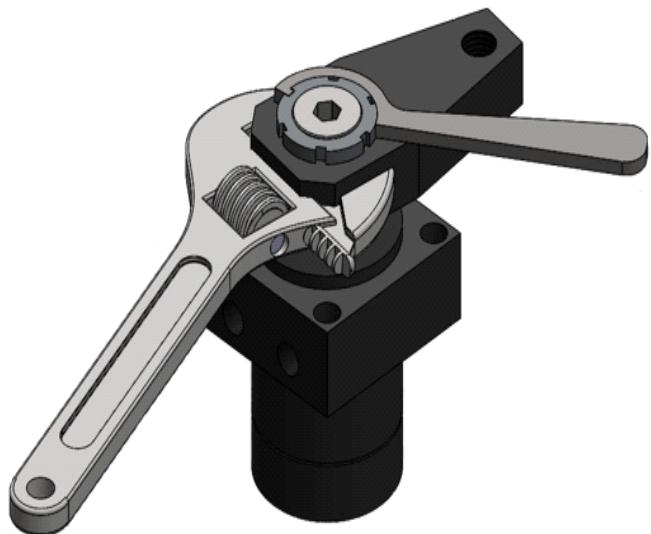

Preac
FLUID POWER

If the Piston Rod is subjected to excessive torque or shock, it could damage the internal swing mechanism.

To prevent this:

During Installation:

1. Place the clamping strap on the piston rod in the required position and lock it by gently tapping it.
2. Tighten the locknut firmly by hand.
3. Bring the swing mechanism to the middle of the swing stroke, hold the strap in place using an adjustable spanner, as illustrated alongside, and tighten the lock nut with a C-spanner. **Ensure the strap does not rotate during tightening.**

During Removal:

1. Bring the swing mechanism to the middle of the swing stroke and follow the above procedure in reverse.
2. After removing the locknut, gently tap the strap to remove it from the piston rod.

By carrying out these steps carefully, the swing mechanism will continue to function satisfactorily.
